

NOOR AHMED

Full Stack Web Developer

Frontend | Backend | AI Integration

Email: slackneveda@gmail.com
Mobile: +92-310-7005399
Location: Lahore, Pakistan
Portfolio: noorahmedportfolio.vercel.app
LinkedIn: noor-ahmed-1089311b4

Passionate Full Stack Developer with 2+ years of experience delivering end-to-end web applications — from responsive Next.js frontends to robust Django, C#, and Node.js backends — with hands-on experience integrating AI/LLM capabilities into real-world products.

CORE COMPETENCIES

Next.js / React.js Development	REST API Design & Development	Django & Python Backend
C# / ASP.NET Core Engineering	Node.js / Express.js	PostgreSQL & MongoDB
TypeScript & JavaScript (ES6+)	JWT Auth & Role-Based Access	AI/LLM API Integration
Responsive & Accessible UI Design	Microservices & MVC Architecture	Git, GitHub & CI/CD
Redux & State Management	Docker & Cloud Deployment	Agile / Scrum Methodology

PROFESSIONAL SUMMARY

- Versatile Full Stack Web Developer with 2+ years of hands-on experience architecting, building, and shipping production-grade web applications across the complete technology stack — from dynamic Next.js/React.js frontends to scalable Django, ASP.NET Core, and Node.js backends.
- Strong command of modern frontend engineering: component-driven UI architecture with Next.js 14 App Router, server-side rendering (SSR), static site generation (SSG), React hooks, Redux Toolkit, and TypeScript — consistently delivering responsive, accessible, and high-performance user experiences.
- Proficient backend developer across multiple ecosystems: Python/Django REST Framework for data-heavy applications, C#/ASP.NET Core for enterprise-grade APIs and Microsoft platform integrations, and Node.js/Express for lightweight, event-driven services.
- Experienced in designing and building RESTful APIs, implementing JWT and OAuth 2.0 authentication, managing relational databases (PostgreSQL, SQL Server) and NoSQL stores (MongoDB, Redis), and connecting services through clean, well-documented API contracts.
- Practical experience integrating AI/LLM capabilities — including Anthropic Claude and OpenAI APIs — into full-stack applications as a functional feature layer, enabling conversational interfaces and intelligent automation without over-engineering.
- Collaborative team player with a track record of delivering across Agile/Scrum teams, contributing to code reviews, technical planning, and cross-timezone remote collaboration with international organizations.

PROFESSIONAL EXPERIENCE

Associate Engineer — Full Stack & AI Integration

Prismware Technologies | Remote | Toronto, Canada | June 2025 – Present

Prismware Technologies builds AI-powered enterprise SaaS platforms, specializing in intelligent automation and conversational interfaces for North American clients.

Responsibilities

- Develop and maintain full-stack web applications using Next.js (App Router, SSR/SSG) on the frontend and Python FastAPI on the backend, delivering end-to-end features across the entire product lifecycle from design to deployment.

- Build and integrate LLM-powered chatbot features using Anthropic Claude API and LangChain as a pragmatic AI layer within existing full-stack applications, handling context management, streaming responses, and prompt design.
- Design and implement RESTful API services with FastAPI and Django REST Framework, including data serialization, input validation, error handling, and OpenAPI/Swagger documentation for frontend and third-party consumers.
- Engineer responsive, accessible React.js and Next.js frontends with Tailwind CSS, implementing real-time streaming chat UIs using Server-Sent Events (SSE) and dynamic data-fetching with React Query.
- Manage PostgreSQL database schemas, write optimized queries, design data models for multi-tenant SaaS architectures, and implement caching strategies using Redis to improve API response performance.
- Participate in Agile sprints across distributed teams — contributing to sprint planning, technical design discussions, pull request reviews, and maintaining high code quality standards on GitHub.

Key Achievements

- Delivered a complete AI chatbot feature within a Next.js/FastAPI lending portal (ECHL) — including frontend streaming UI and backend LLM integration — shipped on schedule to production within 6 weeks.
- Built a reusable full-stack chatbot module (Next.js + FastAPI + Claude API) later adopted across two additional client projects, reducing integration time by an estimated 40%.
- Recognized by senior engineers for independently owning feature delivery from requirement gathering through deployment on a remote international team within the first two months.

Full Stack Developer

Young Dev | Lahore, Pakistan | July 2024 – July 2024

Young Dev is a software development studio delivering custom web applications and digital products for SMEs across Pakistan.

Responsibilities

- Built full-stack web applications with React.js/Redux Toolkit frontends and Django REST Framework backends, covering the complete development lifecycle from database schema design through UI implementation and API integration.
- Developed secure, production-ready REST APIs with Django REST Framework — implementing JWT authentication, custom permission classes, serializer validation, and versioned endpoint design following RESTful best practices.
- Designed and optimized PostgreSQL database schemas using Django ORM, writing efficient queries and implementing database migrations for evolving application requirements.
- Managed development workflows on GitHub using feature branching, pull requests, and peer code reviews — ensuring consistent code quality and smooth team collaboration across the project.
- Integrated third-party APIs and payment gateways, handling authentication flows, webhook processing, and data transformation within the Django backend service layer.

Frontend Developer

XcelTK | Lahore, Pakistan | March 2023 – June 2024

XcelTK is a technology company delivering SaaS products and custom enterprise web applications for clients across Pakistan and the Middle East.

Responsibilities

- Engineered responsive, cross-browser React.js web applications using functional components, custom hooks, React Context, and Redux Toolkit for global state management across complex multi-page SaaS products.
- Integrated RESTful APIs using Axios and React Query, handling asynchronous data fetching, caching, loading states, error boundaries, and optimistic UI updates to deliver smooth, reliable user experiences.
- Translated Figma UI/UX wireframes into pixel-perfect, accessible web interfaces using Tailwind CSS and Material UI, closely collaborating with designers to ensure design fidelity and responsiveness across all screen sizes.
- Implemented frontend performance optimizations including code splitting with React.lazy, dynamic imports, image optimization, and memoization techniques — reducing average page load time by 35%.
- Built and documented reusable component libraries, enabling faster feature development across multiple product lines and reducing frontend duplication across teams.

Key Achievements

- Delivered 6+ production React.js applications over 15 months, consistently meeting sprint deadlines and receiving positive client stakeholder feedback on UI quality.
- Led migration of legacy class-based React components to functional components with hooks across 2 major products, improving code readability and reducing bundle size.
- Reduced frontend bug reports by 25% through implementing React Testing Library unit tests and establishing component-level testing standards across the frontend team.

KEY PROJECTS

ECHL — AI Lending Portal | Full Stack Developer

- Built a full-stack lending portal featuring an AI-powered chatbot for natural language loan queries, enabling customers to explore products, check eligibility, and get guided through the application process.
- Developed the Next.js frontend with a real-time streaming chat interface (SSE), multi-step loan application forms, dynamic product cards, and server-side data fetching using Next.js App Router and React Server Components.
- Built the FastAPI backend handling REST API endpoints, LLM API integration (Anthropic Claude), session context management, and PostgreSQL data persistence for user interactions and application data.
- Stack: Next.js 14, TypeScript, Tailwind CSS, FastAPI (Python), PostgreSQL, Anthropic Claude API, Vercel.

WORN — Enterprise Ticketing System | Full Stack Developer (C# / .NET)

- Customized and extended Microsoft Dynamics 365 with automated ticket routing logic, SLA-based escalation rules, multi-status lifecycle tracking, and email notification workflows — significantly streamlining internal IT support operations.
- Developed backend integration services in C#/ASP.NET Core, exposing clean REST API endpoints that connect Dynamics 365 with internal dashboards and third-party tools using Power Automate flows.
- Designed data models in Microsoft Dataverse, wrote C# business logic plugins, and built custom Entity Framework-backed endpoints for reporting and analytics features consumed by the frontend team.
- Stack: C#, ASP.NET Core, Entity Framework Core, Microsoft Dynamics 365, Dataverse, Power Automate, REST APIs.

Guestx — Automotive Business Dashboard | Full Stack Developer

- Built a full-stack business intelligence dashboard for automotive dealerships featuring real-time call tracking, lead management, customer interaction timelines, and sales pipeline analytics across multiple locations.
- Developed a Next.js frontend with data visualization components (charts, KPI cards, filterable tables) consuming live data from a C#/ASP.NET Core backend through REST APIs and SignalR WebSocket connections for real-time updates.
- Engineered the ASP.NET Core backend connected to Microsoft Dataverse for business data persistence, implementing CRUD operations, business rule enforcement, and real-time event broadcasting via SignalR.
- Stack: Next.js, TypeScript, Tailwind CSS, C#, ASP.NET Core, SignalR, Microsoft Dataverse, REST APIs.

AI-Based Food Delivery System | Full Stack Developer | Academic Capstone

- Designed and built a full-stack food delivery web application with an AI chatbot feature allowing customers to browse menus, place orders, and get recommendations through natural language conversation.
- Developed the React.js frontend with a chat interface, menu browsing UI, cart management, and order tracking — and built the Django REST Framework backend with product, order, and user management APIs.
- Integrated a lightweight LLM API layer for the chatbot feature, handling user intent parsing and menu recommendations as an API-connected feature on top of the core Django backend.
- Stack: React.js, Python, Django REST Framework, PostgreSQL, Node.js (middleware), LLM API, Vercel.

Additional: Node.js & Express Projects

- Built several RESTful API services using Node.js/Express.js with MongoDB, including user authentication systems with JWT, file upload handling with Multer, and real-time notification features using Socket.io.
- Developed a RESTful e-commerce backend in Node.js with product catalog management, shopping cart logic, Stripe payment integration, and order lifecycle management with email confirmation via Nodemailer.

TECHNICAL SKILLS

Frontend Development

Frameworks & Libraries: Next.js 14 (App Router, SSR, SSG, RSC), React.js, TypeScript, JavaScript (ES6+)
State Management: Redux Toolkit, Zustand, React Query (TanStack), Context API, SWR
UI & Styling: Tailwind CSS, Material UI, Shadcn/UI, Radix UI, CSS Modules, Responsive Design, WCAG Accessibility
Performance: Code Splitting, Lazy Loading, React.memo / useMemo, Image Optimization, Core Web Vitals
Tools: Figma (design handoff), Storybook, React Testing Library, Jest, Axios, React Hook Form

Backend Development

Python / Django: Django, Django REST Framework (DRF), FastAPI, Celery (task queues), Pydantic, Pytest
C# / .NET: ASP.NET Core Web API, Entity Framework Core, SignalR, LINQ, Dependency Injection, xUnit
Node.js: Express.js, REST API design, Socket.io, Multer, Nodemailer, JWT middleware
API Design: RESTful APIs, OpenAPI/Swagger, versioning, error handling, rate limiting
Auth & Security: JWT, OAuth 2.0, Role-Based Access Control (RBAC), HTTPS, CORS, input validation

Databases

Relational: PostgreSQL, MySQL, Microsoft SQL Server, SQLite
NoSQL: MongoDB, Redis (caching & session management)
ORM / ODM: Django ORM, Entity Framework Core, Mongoose, SQLAlchemy
Enterprise: Microsoft Dataverse, Dynamics 365 data model

AI / LLM Integration (Applied)

APIs & SDKs: Anthropic Claude API, OpenAI API, Vercel AI SDK
Techniques: Prompt Engineering, LLM API integration, Streaming responses (SSE), Context management
Tooling: LangChain (basics), RAG concepts, vector search fundamentals

Cloud, DevOps & Tools

Deployment: Vercel, AWS (EC2, S3, basics), Docker, Docker Compose
Version Control: Git, GitHub — GitFlow, PR reviews, branch management
CI/CD: GitHub Actions, automated test pipelines, environment-based deployments
Microsoft Stack: Dynamics 365, Power Automate, Microsoft Dataverse, Azure DevOps (basics)
Dev Tools: VS Code, Postman, Insomnia, Figma, Jira, Trello

EDUCATION & TRAINING

Formal Education

Bachelor of Science — Information Engineering Technology

University of Lahore, Lahore, Pakistan | September 2022 – Present | CGPA: 3.80 / 4.00

- Relevant Coursework: Data Structures & Algorithms, Database Systems, Software Engineering, Computer Networks, Web Technologies, Object-Oriented Programming, Artificial Intelligence (introductory).
- Capstone Project: AI-Based Food Delivery System — full-stack application with LLM chatbot integration, awarded distinction for practical software engineering and AI feature implementation.

Continuous Learning

- Next.js & Advanced React Patterns — App Router, React Server Components, streaming, and full-stack patterns (Udemy / official docs, 2024–2025)
- ASP.NET Core & C# Web API Development — Microsoft Learn pathway with project-based application
- Django REST Framework & Python Backend Engineering — Udemy, official Django documentation
- Node.js & Express.js Backend Development — API design, authentication, and database integration
- AI/LLM API Integration — Anthropic documentation, OpenAI cookbook, prompt engineering fundamentals

PERSONAL INFORMATION

Languages: English (Professional), Urdu (Native)
Nationality: Pakistani | Open to Remote & Relocation Opportunities
Work Preference: Remote / Hybrid / On-site | Availability: Immediate
Dev Tools: VS Code, Postman, Figma, Git, Docker, Microsoft Office Suite
