

Noor Ahmed

Full Stack AI Web Developer

Mobile: 03107005399

Email: slackneveda@gmail.com

Location: Lahore, Pakistan

Portfolio: noorahmedportfolio.vercel.app

LinkedIn: noor-ahmed-1089311b4

Full Stack AI Developer with 2+ years of experience building intelligent, end-to-end web applications — integrating AI/ML across

frontend, backend, and deployment pipelines. Proficient in vibe coding methodologies to rapidly prototype and deliver scalable, real-world solutions.

CORE COMPETENCIES

Full Stack Web Development	AI Integration & LLM Implementation	RAG Pipeline Design
REST API Development	Prompt Engineering	Vibe Coding
React.js / Next.js / Redux	Python / Django / FastAPI	C# / ASP.NET Core
Node.js / Express.js	PostgreSQL / MongoDB / Redis	Cloud & DevOps (Vercel / AWS)
Git / GitHub / CI-CD	System Architecture & Design	Agile & Team Collaboration

PROFESSIONAL SUMMARY

- Versatile and results-driven Full Stack AI Developer with 2+ years of hands-on experience designing, building, and deploying intelligent web applications integrating cutting-edge AI/ML technologies.
- Proficient in end-to-end development across the full technology stack — from responsive React.js/Next.js frontends to robust Python/Django and C#/ASP.NET backends and scalable REST APIs.
- Deep expertise in AI engineering including RAG pipeline design, LLM integration, autonomous agent development, and prompt engineering using leading AI platforms such as Anthropic Claude and Vercel AI SDK.
- Hands-on experience building enterprise-grade applications including AI-powered lending portals, automotive dashboards, Microsoft Dynamics 365 customizations, and food delivery platforms with natural language interfaces.
- Strong command of DevOps and cloud deployment workflows using Git/GitHub, CI/CD pipelines, and Vercel platform; adept at bridging design and engineering to deliver production-ready, scalable solutions.
- Proactive, self-motivated professional with a track record of exceeding expectations, contributing to remote international teams, and continuously upskilling in emerging AI and web technologies.

PROFESSIONAL EXPERIENCE

Associate Engineer

Prismware Technologies | Remote — Toronto, Canada | June 2025 – Present

Prismware Technologies is a software product company specializing in AI-driven enterprise solutions.

Responsibilities

- Architect and implement RAG (Retrieval-Augmented Generation) pipelines integrating vector databases, embedding models, and LLMs to deliver context-aware, domain-specific AI chatbot solutions for enterprise clients.
- Develop autonomous AI agents using Anthropic Claude and Vercel AI SDK, enabling end-to-end automation of business workflows including document processing, data extraction, and intelligent query resolution.

- Build and maintain full-stack web applications with React.js frontends and Python/FastAPI backends, ensuring seamless AI feature integration across the entire application stack.
- Collaborate with cross-functional teams across Canada and Pakistan in Agile sprints, participating in code reviews, sprint planning, and technical architecture discussions.
- Design and optimize prompt engineering strategies to maximize LLM output quality, reduce hallucinations, and tailor model behavior to specific business domains.

Highlights

- Successfully delivered RAG-based LLM chatbot features for a production AI lending portal (ECHL), enabling natural language loan queries for end users.
- Recognized for rapid onboarding and contribution to enterprise-grade AI pipelines within the first month of joining.

Full Stack Developer

Young Dev | Lahore, Pakistan | July 2024 – July 2024

Young Dev is a software development firm focused on building scalable web and mobile applications.

Responsibilities

- Developed feature-rich React.js/Redux UIs with responsive design principles, ensuring consistent cross-browser and cross-device user experiences.
- Built and secured Django REST Framework APIs with token-based authentication (JWT), role-based access control, and data serialization for multiple frontend clients.
- Managed full development lifecycle using Git/GitHub including branching strategies, pull requests, and peer code reviews.
- Integrated third-party APIs and services, handling authentication flows, data transformation, and error management within the application layer.

Frontend Developer

XcelTK | Lahore, Pakistan | March 2023 – June 2024

XcelTK is a technology solutions company delivering custom web and SaaS applications.

Responsibilities

- Engineered responsive, high-performance React.js web applications with RESTful API integration for seamless data exchange between frontend and backend systems.
- Developed reusable component libraries following best practices in component architecture, prop management, and state handling using React hooks and context API.
- Collaborated closely with UI/UX designers to translate wireframes and prototypes into pixel-perfect, accessible web interfaces.
- Participated in code reviews, sprint retrospectives, and technical planning meetings contributing to continuous improvement of engineering standards.

Highlights

- Delivered 5+ client-facing React.js applications over 15 months, consistently meeting project milestones and receiving positive client feedback.
- Contributed to a 30% improvement in frontend performance by implementing lazy loading, code splitting, and optimized API call strategies.

KEY PROJECTS

ECHL — AI Lending Portal | Frontend Developer

- Built an AI-powered lending portal featuring a RAG-based chatbot that enables users to query loan products, check eligibility, and navigate financial services using natural language.
- Developed the React.js frontend with dynamic form flows, real-time chatbot interface, and seamless REST API integration with the backend AI pipeline.
- Technologies: React.js, Tailwind CSS, REST APIs, Anthropic Claude (RAG), Vercel AI SDK.

WORN — Enterprise Ticketing System | Full Stack Developer

- Customized Microsoft Dynamics 365 ticketing system with automated ticket routing, priority-based assignment, status tracking workflows, and streamlined issue resolution processes.

- Developed integration layers and backend services to connect Dynamics 365 with external tools and reporting dashboards.
- Technologies: Microsoft Dynamics 365, C#, ASP.NET, REST APIs, Power Automate.

Guestx — Automotive Dashboard | Frontend Developer

- Built a full-stack automotive business dashboard featuring real-time call tracking, lead management, and customer interaction analytics across multiple dealership locations.
- Integrated a React.js frontend with a C# backend connected to Microsoft Dataverse for data persistence, business logic execution, and real-time updates.
- Technologies: React.js, C#, Microsoft Dataverse, REST APIs, SignalR (real-time updates).

AI-Based Food Delivery System | Full Stack Developer | Academic Project

- Developed a full-stack food delivery application with an integrated RAG-based chatbot enabling customers to place orders, explore menus, and discover recommendations using natural language queries.
- Implemented backend AI pipeline with vector search, embedding generation, and LLM response synthesis for the conversational ordering interface.
- Technologies: React.js, Python, Django, RAG pipeline, vector database, LLM API integration.

TECHNICAL SKILLS

Frontend Development

- React.js, Next.js, Redux, Redux Toolkit, React Query, Context API, React Router
- HTML5, CSS3, Tailwind CSS, Material UI, Shadcn/UI, Responsive & Accessible Web Design
- JavaScript (ES6+), TypeScript

Backend Development

- Python: Django, Django REST Framework, FastAPI, Celery, SQLAlchemy
- C#: ASP.NET Core, Entity Framework Core, Web API, SignalR
- Node.js / Express.js — REST API Design & Development, JWT Authentication, OAuth 2.0

AI / Machine Learning

- Large Language Models (LLMs): Anthropic Claude, OpenAI GPT, Vercel AI SDK
- RAG Pipeline Design: Vector Databases (Pinecone, Chroma), Embedding Models, LangChain
- Autonomous AI Agents, Prompt Engineering, Fine-tuning Concepts

Databases

- Relational: PostgreSQL, MySQL, Microsoft SQL Server
- NoSQL: MongoDB, Redis
- Cloud/Enterprise: Microsoft Dataverse

Cloud, DevOps & Tools

- Version Control: Git, GitHub — branching strategies, PRs, code reviews
- Deployment: Vercel, AWS (EC2, S3), Docker (basics)
- Microsoft Ecosystem: Dynamics 365, Power Automate, Dataverse
- Project Tools: Agile/Scrum, Jira, Trello, Postman, Figma

EDUCATION & TRAINING

Education

Bachelor of Science — Information Engineering Technology | University of Lahore, Pakistan |
September 2022 – Present | CGPA: 3.80

Training & Certifications

- Full Stack Web Development — Self-directed learning via industry platforms (Udemy, freeCodeCamp, official documentation)
- AI & LLM Engineering — Anthropic Claude API documentation, LangChain, Vercel AI SDK hands-on practice
- REST API Design & Django REST Framework — Online certification training

PERSONAL INFORMATION

Languages: English (Professional), Urdu (Native)

Nationality: Pakistani

Software & Tools: VS Code, Postman, Figma, Git, Docker, Microsoft Office Suite
